EDUCATION

Multimedia University

Bachelor of Computer Science Cybersecurity

- **GPA: 3.80/4.0**

August 2024 - July 2026

Cyberjaya, Selangor

Asia Pacific University of Technology & Innovation

Diploma in Software Engineering

- **GPA: 3.66/4.0**

April 2022 - August 2024

Bukit Jalil, Kuala Lumpur

WORK EXPERIENCE

OFCOM Solution Sdn Bhd

Software Engineering Internship

July 2025 - October 2025

Onsite

- Developed Role-Based Access Control (RBAC) and SMTP-based OTP verification to enhance application authentication and authorization.
- Built RESTful APIs and implemented backend validation to ensure secure and reliable data processing.
- Maintained MySQL and MongoDB databases while optimizing pagination and search for performance large datasets.
- Developed automated PDF invoice generation and Excel export features to streamline business workflows.

Xover Consultancy Sdn Bhd

Part Time Software Engineer

February 2025 - March 2025

Remote

- Strengthened application security by implementing an idle session detection service that automatically cleared JWT tokens and enforced user logout after 30 minutes of inactivity.
- Developed and enhanced full-stack web applications based on client requirements using Angular and Spring Boot.

April 2024 - July 2024

Remote

Software Engineering Internship

- Implement pipeline to standardize phone number formats
- Designed and maintained SQL (MySQL) and NoSQL (MongoDB) databases, developed RESTful APIs for form submissions and data retrieval, and integrated Elasticsearch to enhance search performance.

PROJECTS

Network Traffic Monitoring & Analysis Tool (C++, Next.js, Node.js) | [Github](#)

- Developed a hybrid network traffic monitoring system combining heuristic analysis with a Random Forest machine learning model to detect malicious network activities.
- Built a high-performance packet capture engine using C++ and Npcap, with a Next.js dashboard for real-time traffic visualization and alert management.
- Trained the detection model using the CIC-IDS2017 dataset, achieving 98% accuracy, and validated it on the CSE-CIC-IDS2018 dataset with 84% accuracy.

Cryptography Letter Frequency Analysis (Python) | [Github](#)

- Developed a Python application to decrypt monoalphabetic substitution ciphers using letter frequency analysis and English quadgram frequency scoring.
- Implemented a hill-climbing optimization algorithm to iteratively refine substitution keys and improve plaintext accuracy.

Battleship-Simulator (C++) | [Github](#)

- C++ simulator that models turn-based naval battles on a grid, featuring multiple warship types with unique abilities and behaviors. Implemented using object-oriented programming and pointer management to handle ship lifecycles, with a linked list controlling turn order and game state.

CERTIFICATIONS, SKILLS & INTERESTS

- **Technologies:** Java, Python, C++, JavaScript, TypeScript, Golang, Basic Linux Commands, MySQL, NoSQL, WireShark, Nmap, Git
- **Skills:** Problem Solving, Technical Writing, Team Collaboration, Time Management
- **Interests:** Games; Basketball; Anime; Traveling; Vtuber; Reddit; Reverse Engineer Website;
